

How AI Changes Organizations and Cognition

with Karim Lakhani

Artificial intelligence (AI) is rapidly transforming how organizations operate and how humans think. This talk will explore three key ways in which AI is impacting organizations and human cognition. First, AI is emerging as a central platform for organizing enterprises in the 21st century. Second, AI enables unprecedented opportunities for learning at the individual and organizational level through its ability to analyze massive datasets, identify patterns, and improve continuously through experience. Finally, while AI may not replace humans, humans augmented with AI likely will replace humans without AI for many roles - though not in all cases. In summary, this talk will explore how AI is positioned to radically change the way organizations operate at scale, extend human problem-solving and learning, and transform the collaboration of people with increasingly powerful advanced technologies. The implications are enormous and will drive tremendous innovation in the years ahead.

JOIN US LIVE ON MONDAY, OCTOBER 2 FROM 5-6:00PM

REGISTRATION CLOSSES AT 3PM ON MONDAY, OCTOBER 2
